

DSL - Broadband

Digital Subscriber Line (DSL), known as broadband, provides companies with *always-on* Internet access via a standard analogue line. DSL's speed and quality vary depending on service and contention, with entry level packages running at a download rate of up to 2Mbps and an upload rate of up to 256Kbps.

Your benefits...

Our business grade Broadband is available in a variety of speeds and quality depending on your requirements. Our packages offer much lower contention than standard services and are available at up to three times the speed of standard business DSL circuits - up to 24Mbps download and 2.5Mbps upload. Our broadband services not only ensure fast and secure Internet access, but also present high capability functions, including file transfer, email services, Virtual Private Networking (VPN) and remote access.

What we can do for you...

CloudSecure delivers your data, network, software and communications as managed services. Our hosted solutions in Security, Business Continuity, Voice, Messaging and Collaboration enable companies of all sizes to streamline business processes, excel in productivity and reduce operational costs.

Most importantly, our managed services give you the option to have the entirety or part of your IT taken care of, leaving you to concentrate on what is vital to your business - your customers.
