

Managed Firewalls

Firewall is a critical element in protecting a network, but what does that really mean to your business? Security is on the top list of issues for Internet exposed servers. There are several options to ensure that your network is protected - none are more effective than installing a firewall. A firewall is a gateway that limits access between networks in accordance with local security policy. Often it is dedicated hardware that manages the distribution of data across your network. Specialist models are purposely built to maximise the speed and security with which it performs this role.

Your benefits...

The right firewall solution enables business continuity to your organisation as it prevents disruption of mission-critical applications and services caused by security breaches. **CloudSecure** provides a fully-hosted Cisco firewall at the gateway between your private network and the internet. Additional options include URL filtering, IPSec VPNs (IPSec Virtual Private Networks), SSL VPNs, Managed Network Monitoring and DMZs (Demilitarized Zones). These options can be combined to guarantee an integrated internet security solution. Our managed firewalls can be implemented in both hardware and software, or a combination of both.

What we can do for you...

CloudSecure provides managed firewall solutions that prevent unauthorised Internet users from accessing servers or private networks connected to the Internet. All messages entering or leaving the server or network pass through the firewall, which examines each message and blocks those that do not meet the specified security criteria.

Our skilled specialists look after every aspect of the installation, including regular maintenance. **CloudSecure** managed firewalls are for businesses looking for a complete Internet security solution encompassing the technical sophistication they need without the costs of developing detailed security expertise in-house or up-front capital expenditure.

About **CloudSecure**...

CloudSecure delivers your data, network, software and communications as managed services. Our hosted solutions in Security, Business Continuity, Voice, Messaging and Collaboration enable companies of all sizes to streamline business processes, excel in productivity and reduce operational costs.

Most importantly, our managed services give you the option to have the entirety or part of your IT taken care of, leaving you to concentrate on what is vital to your business - your customers.
